Projects

Yowl (*Rails, React.js, Redux, PostgreSQL)* [Github](#) | [Live](#)
Single page web application based on Yelp
- Enabled RESTful JSON API for creating new users, locating businesses, and writing reviews
- Cached database queries client-side in Redux store to prevent unnecessary queries, optimizing load time
- Integrated Google Map API for geolocation, providing visualization of business locations

Crystal Hunter (*JavaScript, CSS3, HTML5 Canvas)* [Github](#) | [Live](#)
Browser game based on Sokoban using Object-Oriented Design
- Incorporated EaselJS library to simplify HTML Canvas
- Utilized event handling for document to JavaScript Interaction
- Leveraged inheritance through Tile superclass for extensible game objects and DRY code

JEasy (*Vanilla JavaScript)* [Github](#)
Lightweight JavaScript DOM Manipulation Library
- Simplified DOM manipulation, event handling, and AJAX requests

Experience

INTEL-NTU Connected Computing Center   Taipei City, Taiwan
Research Intern   June 2016-August 2016
- Implemented LED light warning system using Python
- Researched internet of things implementations for smarter technologies in daily use
- Created a security system by combining LED lights, sound sensors, and thermal sensors through NTU's WuKong IoT middleware system
