Projects

Yowl *(Rails, React.js, Redux, PostgreSQL)*
Single page web application based on Yelp
- Enables RESTful JSON API for creating new users, locating businesses, and making reviews
- Caches database queries client-side in Redux store to prevent unnecessary queries and optimize load time
- Integrates Google Map API for geolocation, providing visualization of business locations

Crystal Hunter *(JavaScript, CSS3, HTML5 Canvas)*
Browser game based on Sokoban using Object-Oriented design
- Incorporates Easel.js library to simplify HTML Canvas functionality and create more visually appealing gaming experience
- Leverages inheritance through Tile parent class for extensible game objects and DRY code

JEasy *(JavaScript)*
Lightweight JavaScript DOM Manipulation Library
- Simplifies DOM manipulation, event handling, and Ajax requests, allowing for more readable and concise code

EXPERIENCE

INTEL-NTU Connected Computing Center
Taipei City, Taiwan
Research Intern June 2016-August 2016
- Implemented LED light warning system using Python
- Researched internet of things implementations for smarter technologies in daily use
- Created a security system by combining LED lights, sound sensors, and thermal sensors through NTU's WuKong IoT middleware system
